Sheet-2:

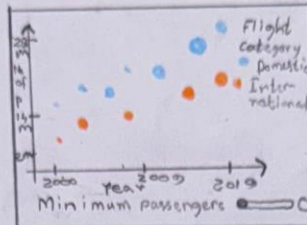

LAYOUT

Air Traffic in Malaysia

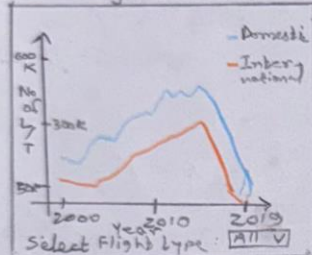

Airports in Malaysia

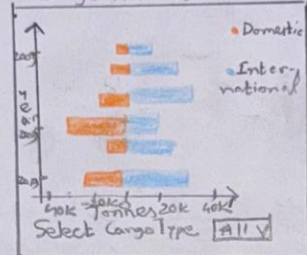

Passengers in Malaysia

Landings/Takeoffs

Cargo handled

TITLE: Air Traffic in Malaysia

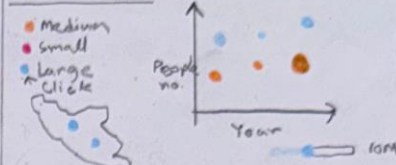

AUTHOR: Naveed Mahmud

DATE: 07/10/24

SHEET: 02

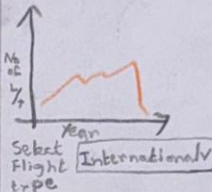

TASK: Design an appropriate dashboard layout.

OPERATION

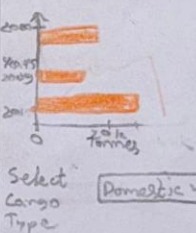

You can click on the legend to highlight a category in the map.

You can drag the sliders to show different starting range of passengers.

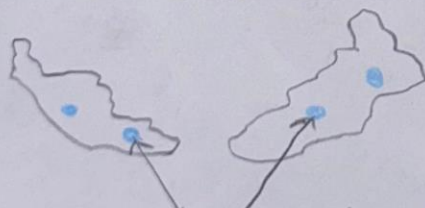

You can toggle the flight type to only see that.

You can toggle the cargo type to only see that.

FOCUS

Here the focus is the airport distribution map as it gives a general idea of which areas could have the busiest air traffic.

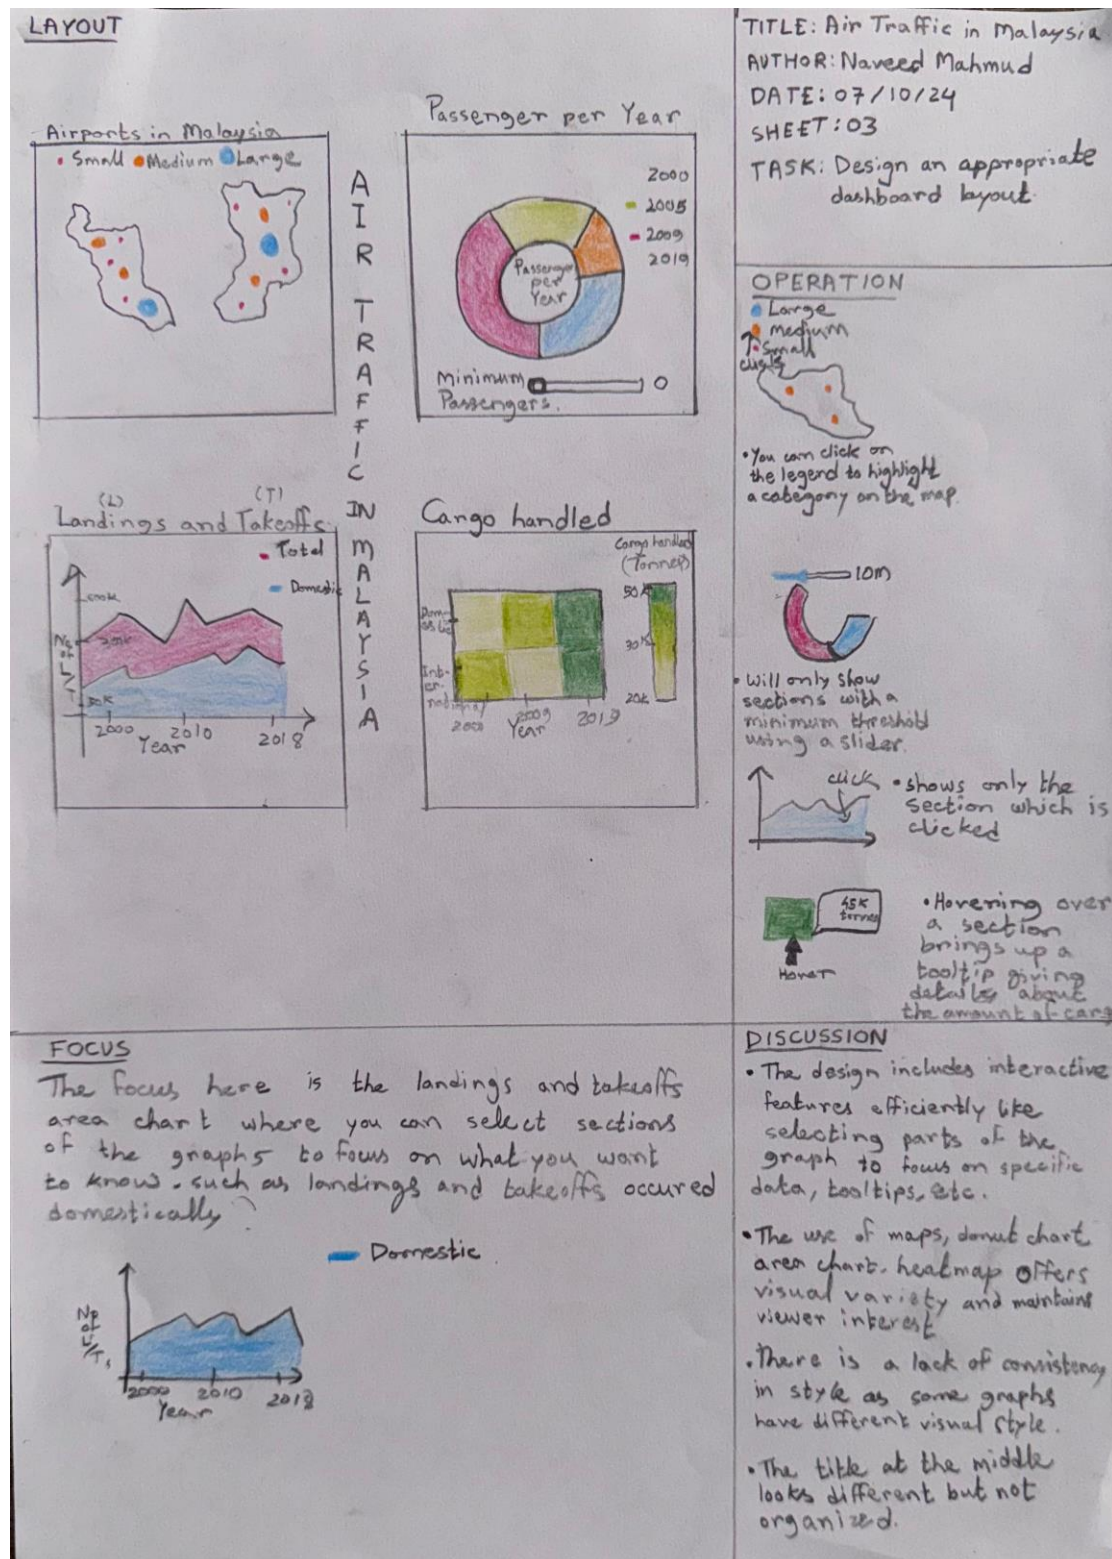

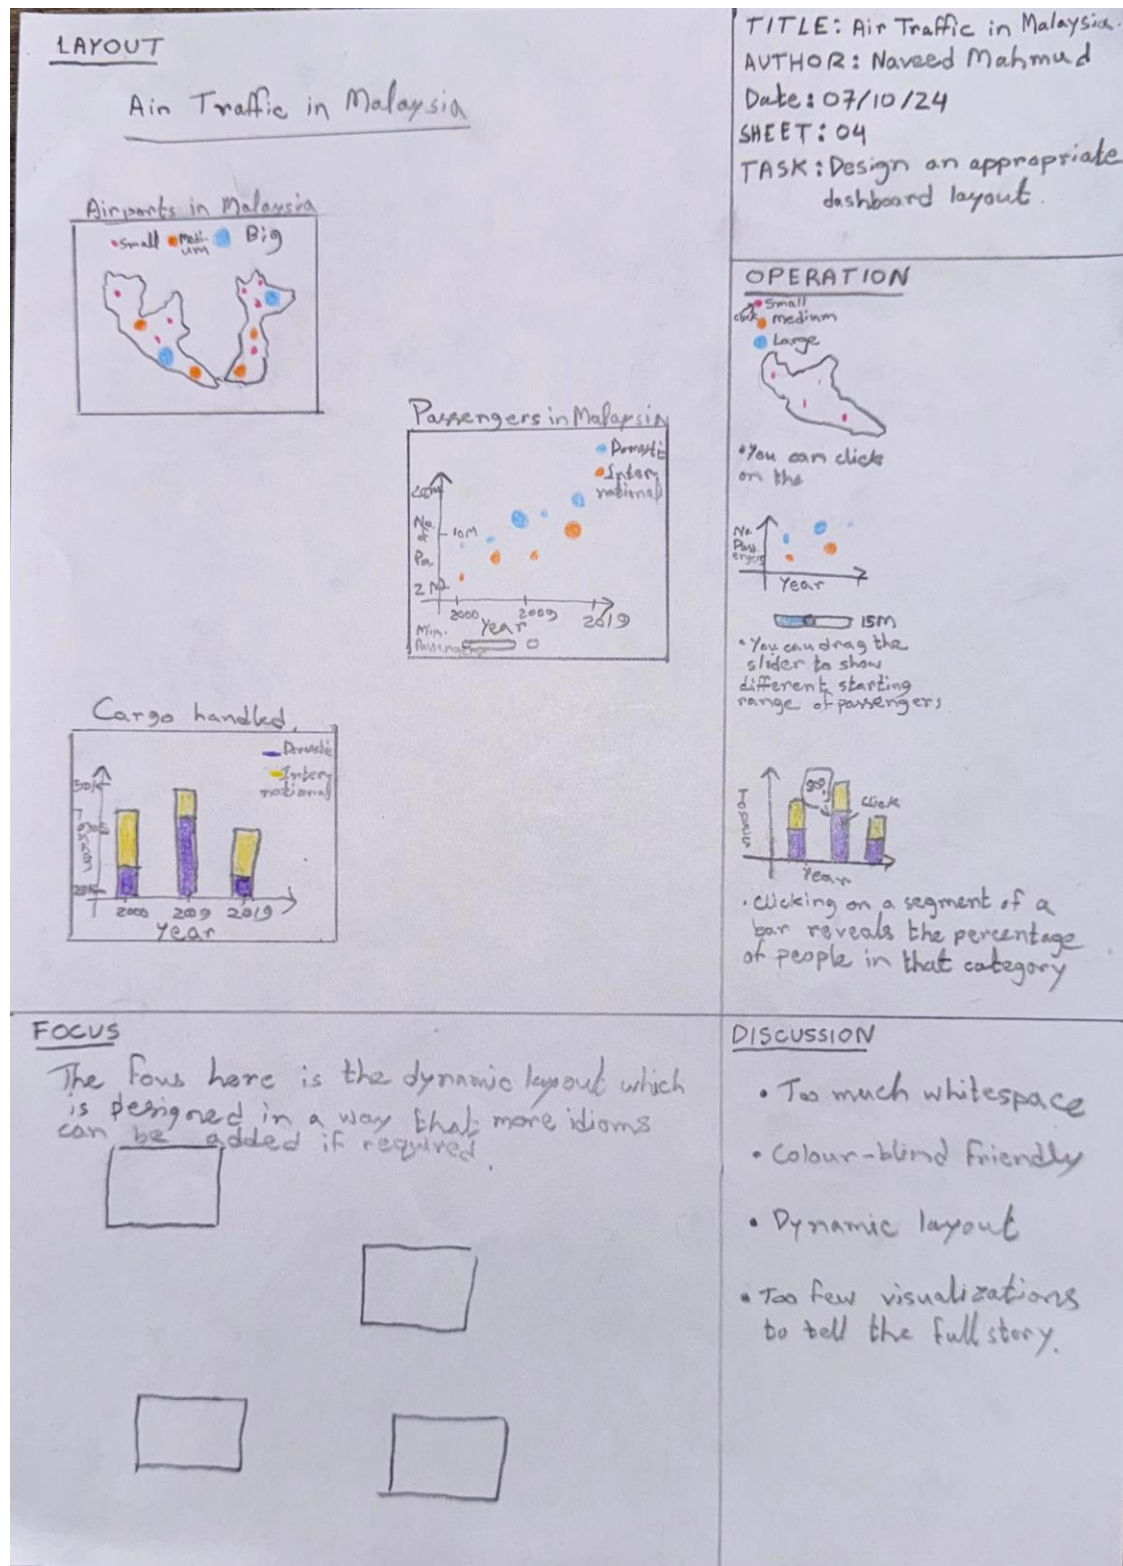

Large airports are likely to be the busiest.

DISCUSSION

- Use of colour-coding effectively distinguishes between categories like domestic and international flights for example.
- The design lacks flexibility for future expansion.
- Lack of detailed annotations.
